The Department of Civil and Environmental Engineering and Earth Sciences at Notre Dame is inviting applicants, at all levels, to apply for a tenure-track position in Environmental Engineering. Research areas of interest include, but are not limited to: microbiological and/or chemical aspects of water quality and treatment, water reuse, application of molecular biology to environmental engineering, micropollutants, mathematical modeling of environmental processes, bioresource recovery, green energy, environmental effects of nanoparticles/nanoengineering, environmental surface chemistry, and fate and transport of heavy metals and actinides. The department has a unique blend of environmental engineering and environmental geoscience faculty, and has outstanding research facilities. Candidates are expected to exhibit dedication to excellence in research, teaching, and professional service. Information about the department can be found at http://www.ccee.ubc.ca/. More information about the position, including a link for submitting applications, can be found at http://ccee.ubc.ca/position-available. Review of applications will begin December 1, 2014, but applications will be accepted until the position is filled.
