The Michigan Department of Transportation is actively recruiting for a Structures Engineer in Lansing, MI.

This position functions at the entry/intermediate/experienced level as a resource engineer to coordinate and/or oversee Region Bridge Support operations, work methods and procedures. This person serves as a liaison between Region Bridge Support and Region Bridge Personnel, Local Agencies and Bridge Authorities in the areas of bridge engineering maintenance and inspection. The position also provides training and technical analysis on the use of new materials and innovative bridge maintenance processes, including assisting with the formulation of new guidelines and procurement of bridge maintenance materials and equipment. This position participates in the inspection, evaluation and documentation of high load damaged bridges on a statewide basis. This position also assists in the evaluation of repairs for other urgent bridge repairs, as well as assist in the bridge preventive maintenance program. This position assists in the creating, scheduling, and oversight of bridge maintenance contracts and evaluates special projects by the application of engineering principles.
