Dear Faculty Member,

Some of your students could be the perfect fit for the [Woodrow Wilson Teaching Fellowship](http://www.wwf.org), a pioneering program that prepares outstanding teachers for the schools that need them most.

The Woodrow Wilson Teaching Fellowship, now offered in Georgia, Indiana and New Jersey, recruits current seniors, recent grads, and alumni with backgrounds in STEM (science, technology, engineering and math) to teach in high-need secondary schools. Fellows receive a generous stipend ($30,000-32,000) to complete a master’s degree program that includes a full school year of experience in local high-need classrooms. In turn, they commit to teach for three years in high-need secondary urban or rural schools. They also get mentoring and support from both their universities and their schools throughout their three-year commitment.

You know who your strongest students are. You also know which ones might have the skills and the passion for STEM to work with young people in high-need schools—the young people who may someday be your college students, if they first have good high school
teachers, and who may miss a lifetime of opportunities if they don’t.

If you’re picturing two or three of your top students or recent grads with those young people who so urgently need them, please pass this email on to those you think would be strong applicants. And encourage them to apply early—it’s a very competitive process. The 2015 Woodrow Wilson Teaching Fellowship program offers three application deadlines: October 16, 2015 (Round 1); November 30, 2015 (Round 2); and January 31, 2016 (Round 3). We also offer webinars throughout the year for those interested in learning more about the program. You can learn more at woodrow.org/STEM.

Thanks for giving this opportunity some thought. We hope to hear from your students.

Sincerely,

Jose Ochoa
Director, Woodrow Wilson Teaching Fellowships
