Often throughout her career, Brenda Darden Wilkerson (’85) has been the only woman or the only person of color in the room. As a black woman in tech, she knows what it’s like to feel alone in the field.

Today, Wilkerson uses her experience to advocate for access, opportunity, and social justice for underrepresented communities in tech. As president and CEO of AnitaB.org (formerly known as the Anita Borg Institute for Women and Technology), a non-profit organization dedicated to connecting, inspiring, and guiding women in computing, she helps millions of women around the world.

“I’ve been a female technologist—I know the struggles and challenges,” she shares. “When we have people of different ages with different backgrounds and experiences at the table, we create a much richer experience.”

While there, she spearheaded the Computer Science for All program, an initiative to increase access to computer science education for students at all grade levels as a basic part of the curriculum. “Technology often feels like an elite sport, and there’s no reason for it to be that way,” Wilkerson says.

The program caught the attention of the Obama administration and Wilkerson got to help launch Computer Science for All programs across the country. “To have President Obama’s people come and say, ‘We want to do that, too’—I’m humbled when I think about it,” she says. “I’m just so grateful for his leadership.”

Wilkerson hopes to channel that experience to help reverse the declining role of women in the tech sector with the goal of increasing their presence to 50 percent. “Women should be represented as we are in culture,” she says. “Everybody who has the aptitude and is willing to work toward the goal of using tech to solve the problems of mankind should have a place at the table.”

By using engineering thinking for social impact, Wilkerson seeks to create a better world. “I wanted computer science in the schools because it’s engineering thinking, and everyone needs to be a critical thinker,” she says. “We’d have a much better citizenry if we taught everyone to think critically.”
