CPT eligible for  
International Students**

**Internship course  
maintains your full-time  
student status**

## What is the Engineering Internship Program?

Students gain practical experience with employers in industry, government, or commerce. Internships are typically completed in the summer and consist of a single work term related to the student's academic major or career goals.

## Who Can Participate in the Program?

Undergraduate students in good academic standing who have completed CRDV301 are eligible for the Engineering Internship Program. Internships may take place during any quarter of the year. Students are enrolled as full-time with no tuition charges. Returning to the same employer for multiple terms may allow you to convert your internship into a Co-op

## How Do I Get an Internship, and What Do I Do When I Get One?

- Complete the prerequisite course, CRDV 301 - Introduction to Career Development. This course is offered in during the academic year.
- Work with a Career Development Advisor to create a strategy for your internship search
- Accept an offer, report your hire in McCormickConnect and schedule a Registration Meeting with your Career Advisor.
- After your meeting, your advisor will enroll you in an Engineering Internship course
- Submit an evaluation of your experiences for a Satisfactory ("S") grade, which does not impact GPA
